

ELEVATE

i3 has worked with its power generation clients to identify the critical issues impacting operations, developed innovative solutions to address gaps, and has served as the catalyst to operationalize the changes needed to drive sustained performance improvements.

Client Partnerships

Partnered with a coal fired generation plant to establish a maintenance work management process targeted at optimizing the utilization of people, resources, and O&M spend. This effort increased maintenance time on tools, work order throughput, reduced emergency work, and promoted safer, more reliable operations.

Acted as the project manager for a nuclear power refurbishment capital project. The i3 project manager inserted expertise at all levels of the project, was completed within 3% of the updated forecast, schedule was completed with less than 4% error equating to less than 48 hours difference for the execution portion, and the project was deemed a success by all parties involved.
